

ABSTRACT

A vacuum container [having a vacuum producing means,] mounted on
10 a vehicle, a trailer, or skid mounted with options chosen from an articulating
boom, [a water jetter system,] a liquid pressure dissipater [dissipating
means], a utility valve actuator, having a drive motor for the valve actuator
being either hydraulic, air, or electric powered, a global positioning system
to determine and log the position of work, service or hardware, controls and
15 measuring devices and de-chlorinator. Dirt or debris are made vacuum able
by using a Pressurized water nozzle, air pressure nozzle, or tools powered by
the auxiliary power supply.
